Pre Call Agent

Publisher call prep, automated. From cold open to live deck in minutes —
with a human signing off before anything ships.

Showcase document · process flow, sample output, app preview

What it does

Every morning, Pre Call Agent reads your calendar, identifies which meetings are with known publisher partners, and assembles a deck-ready brief for each one. Inputs span public news, past-call transcripts (uploaded as .txt by the rep), uploaded campaign performance, and internal account notes. The agent never auto-sends — every brief is a draft until a human approves.

Process flow

Tech stack

LAYER	CHOICE	WHY
Backend	FastAPI on Vercel (Python 3.12)	Serverless, cheap, scales to zero
LLM	Gemini 2.5 Flash Lite + Google Search grounding	Native Google Search grounding; calendar fetched via the Google Calendar API using the same service account as Sheets
Storage	Google Sheets	No DB to manage; rep-friendly to inspect/edit
Past calls	Rep-uploaded .txt transcripts	No vendor API key needed; works regardless of where the transcript came from (Avoma, Gong, Otter, manual)
Frontend	Vanilla HTML/CSS/JS in <code>public/</code>	Zero build step

Today's calls — auto-detected

The app reads your Google Calendar, matches each event against the curated publisher list (P0/P1/P2), and shows them sorted by priority. Internal meetings, 1:1s, and personal blocks are filtered out automatically.

Mockup of `public/index.html` · the live app uses the same styles.

How publisher matching works

- Title match** — event title contains a publisher name or alias (e.g. `"LTS Sync"` matches LinkedIn via the `"LTS"` alias)
- Domain match** — attendee email domain matches a known publisher domain (e.g. `@indeed.com` → Indeed)
- External inferred** — neither, but the event clearly involves an external company → tagged `unlisted`

The 139 publishers are curated in `app/publishers.py`, sorted into tiers — 26 P0, 113 P1, 0 P2 (placeholder). Reps can promote/demote any entry.

Workbench — feed context, generate brief

Click any call to open the workbench. Four tabs let you feed the agent context it can't get on its own (notes, performance CSVs, past-call transcripts you've uploaded).

 **ACCOUNT SNAPSHOT**

EDIT

Indeed in cost-cutting mode after layoffs but pushing hard on Smart Sourcing CPC. Our CPA degrading right as renewal approaches.

WHAT'S CHANGED

- Layoffs in product org announced March 28 (TechCrunch)
- Smart Sourcing CPC inventory launched April 12
- New VP Partnerships, J. Reyes, joined April 1

 **PERFORMANCE READ**

EDIT

Apply rate down 14% MoM driven by ClientX. CPA at \$48 — 22% above target.

SPEND	CLICKS	APPLIES	CPC	CPA	APPLY RATE
\$84K	12.4K	1.75K	\$6.77	\$48	14.1%

 **TALKING POINTS**

EDIT

Open with the layoffs — acknowledge the org change, ask who's now owning our partnership.
why: signals awareness, opens space to re-anchor the relationship · tied to news

Bring CPA degradation up before they do — show we're tracking it.
why: defuses an awkward question · tied to performance

Pitch a Smart Sourcing CPC pilot for ClientX top 5 campaigns.
why: ties to their new product push, lets us reset the CPA narrative · tied to news + performance

What the brief actually contains

Real example brief for a 10:00 Indeed Quarterly Partner Review, with all four signal sources contributing.

Account snapshot

Headline: Indeed is in cost-cutting mode after the March layoffs but pushing hard on Smart Sourcing CPC. Our CPA is degrading right as renewal approaches.

WHAT'S CHANGED

- Layoffs in product org announced March 28 (TechCrunch, T1)
- Smart Sourcing CPC inventory launched April 12 (Indeed blog, T1)
- New VP Partnerships, J. Reyes, joined April 1 (LinkedIn, T1)

WHAT MATTERS NOW

Indeed wants programmatic partners onto Smart Sourcing fast. Our CPA degradation hands them ammunition in renewal talks scheduled for May. Closing this gap before then is the central play.

Performance read

Headline: Apply rate down 14% MoM driven by ClientX. CPA at \$48 — 22% above target.

METRIC	LAST 30D	PRIOR 30D	Δ
Spend	\$84,230	\$80,120	+5.1%
Applies	1,754	2,041	-14.1%
CPA	\$48.02	\$39.25	+22.4%
Apply rate	14.1%	16.8%	-16.1%

WHAT'S WORKING

- Healthcare campaigns held flat at \$32 CPA — protect this segment

WHAT'S NOT

- ClientX CPA jumped from \$35 → \$61 in 30 days — single-handed driver of the average
- Apply rate compression on entry-level retail postings — likely Indeed's relevance algorithm change

WHERE TO LEAN IN

- Test Smart Sourcing CPC on ClientX's 5 highest-spend campaigns for 2 weeks
- Pause low-quality ClientX feeds while we re-tune

🔑 What's in the air (last 90 days)

#	HEADLINE	SOURCE	TIER · REGENCY
1	Indeed cuts 1,000 product roles, restructures around AI matching	TechCrunch	T1 · This week
2	Smart Sourcing CPC inventory rolls out to programmatic partners	Indeed Blog	T1 · This month
3	Recruit Holdings names new Indeed CEO, signals tighter cost control	Reuters	T1 · This month

📄 Where we left off (transcripts · last 3 calls)

Last call summary: Discussion centered on ATS feed reliability complaints from ClientX. Mary committed to escalating internally. Tone tense around CPA performance.

OPEN COMMITMENTS

- **Joveo:** Send Q1 performance deck (due April 5 — 24 days overdue)
- **Indeed:** Share new Smart Sourcing CPC eligibility criteria (open)

OPEN THREADS

- ClientX ATS feed complaint — unresolved
- Quarterly business review date for Q2 — never confirmed

Sentiment last call: tense · 3 transcripts analysed

💬 Talking points

1. **Open with the layoffs.** Acknowledge the org change, ask who's now owning our partnership. *Why: signals awareness, opens space to re-anchor.*
2. **Bring CPA degradation up before they do.** Show we're tracking. *Why: defuses an awkward question.*
3. **Pitch a Smart Sourcing CPC pilot for ClientX top 5 campaigns.** *Why: ties to their new product push, lets us reset the CPA narrative.*
4. **Confirm Q2 QBR date.** *Why: the transcript synthesis flagged this is open from last call.*

🚀 Campaign recommendations

TITLE	WHY	EXPECTED IMPACT	RISK
Smart Sourcing CPC pilot — ClientX top 5	Aligns with Indeed's product push; ClientX is the CPA outlier driving the trend	15% CPA reduction on those 5 campaigns within 14 days	Geo coverage may be thin in Tier-2 cities
Pause bottom-quartile retail feeds	Apply rate compression suggests relevance algo deprioritised them	Cut ~\$8K/mo wasted spend with no apply loss	Need ClientX sign-off before pausing

⚠️ Don't walk in blind

- **Threads to close:** Send the Q1 deck (24 days overdue)

What to configure before launch

Required environment variables

KEY	REQUIRED	SOURCE
<code>GEMINI_API_KEY</code>	Yes	<code>aistudio.google.com/apikey</code>
<code>GOOGLE_CALENDAR_ID</code>	No (defaults to <code>primary</code>)	Use rep's email if domain-wide delegation is enabled
<code>GOOGLE_CREDENTIALS_JSON</code>	Yes	Google Cloud → service account JSON, on a single line
<code>GOOGLE_SHEET_ID</code>	Yes	From the Sheet URL: <code>docs.google.com/spreadsheets/d/<THIS>/edit</code>
<code>SLACK_WEBHOOK_URL</code>	Optional	Slack → Apps → Incoming Webhooks. Without it, app shows a copyable preview.
<code>SLACK_DEFAULT_CHANNEL</code>	No	Defaults to <code>#supply-partnership-product</code>

One-time setup

1. **Google Cloud project** → enable **Sheets API**, **Calendar API**, and **Gmail API** → create service account for Sheets → download JSON
2. **Create the Sheet**, share it with the service account email, copy its ID
3. **Configure OAuth consent + client** with these scopes: `openid`, `userinfo.email`, `userinfo.profile`, `calendar.readonly`, and `gmail.send` (for the  Email button)
4. **Gemini key** from `aistudio.google.com/apikey` (~30 seconds) — enable billing on the Cloud project to lift the daily free-tier cap
5. **Slack webhook** if posting to channels (optional)
6. **Playwright + Chromium** (optional, for highest-fidelity server-side PDFs locally): `playwright install chromium`. Without it, the  Download PDF button falls back to the browser's Save-as-PDF dialog automatically.
7. **Curate publishers** in `app/publishers.py` — promote LinkedIn to P0, add Glassdoor, fill missing domains

Daily user flow (employees)

1. Open the app → sign in with Google (one-time consent for `calendar.readonly` + `gmail.send`)
2. See today's calls auto-loaded, sorted by tier
3. Click into a call → optionally add notes / upload Mojo CSV(s) / upload up to 3 past-call .txt transcripts → click  **Generate briefing**
4. Wait ~10–15 seconds for synthesis (gather steps run in parallel)
5. Review & edit any section that needs sharpening
6. Click  **Approve**, then ship via  **Open deck**,  **Download PDF**,  **Send to Slack**, or  **Email** (server-side Gmail send to your inbox)
7. Need to revise a previously-approved brief? Open it from **Past briefings** → click  **Edit this briefing** → make changes →  **Re-approve** (same record updated). Or  **Save as new draft** to fork.

8. Walk into the call
